Sequence 171, Application US/09720435A

Patent No. 6803187

GENERAL INFORMATION:

TITLE OF INVENTION: Method for detection of drug-selected mutations in the protease

TITLE OF INVENTION: Gene

TITLE OF INVENTION: Mumber: US/09/720,435A

CURRENT APPLICATION NUMBER: US/09/720,435A

CURRENT PILING DATE: 2001.06-25

PRIOR FILING DATE: 1999-06-22

PRIOR FILING DATE: 1998-06-24

PRIOR FILING DATE: 1998-06-24

PRIOR FILING DATE: 1998-06-34

PRIOR FILING DATE: 1998-06-34

NUMBER OF SEQ ID NOS: 529

SOFTWARE: Patentin Version 3.2

Sequence 25953, Application US/10956157

Sequence 25953, Application US/10956157

Publication No. US20050118625A1

GENERAL INFORMATION:

APPLICANT: Wyeth

APPLICANT: Wounts, William

TITLE OF INVENTION: WUCLEIC ACID ARRAYS FOR DETECTING GENE EXPRESSION ASSOCIATED WITH

TITLE OF INVENTION: WUMAN OSTEOARTHRITIS AND HUMAN PROTEASES

TITLE OF INVENTION: UNMARR: US/10/956,157

CURRENT FILING DATE: 2004-10-04

SOUTHWARE PATENTING ATE: 2004-10-04

SOUTHWARE PATENTING ATE: 2004-10-04

SEQ ID NO 25953

LENGTH: 25
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              US-10-956-157-25954

Sequence 195328, Application US/10956157

Publication No. US20050118625A1

GENERAL INFORMATION:
APPLICANT: Wyeth
APPLICANT: Wounts, William
TITLE OF INVENTION: NUCLEIC ACID ARRAYS FOR DETECTING GENE EXPRESSION ASSOCIATED WITH
TITLE OF INVENTION: HUMAN OSTEOARTHRITIS AND HUMAN PROTEASES
FILE REFERENCE: 031896-043000 (AM 101081)
CURRENT APPLICATION WHOBER: US/10/956,157
CURRENT FILING DATE: 2004-10-04
NUMBER OF SEQ ID NOS: 319805
SOCTHARE: PATENTING VALE: 25
LENGTH: 25
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     APPLICANT: Wyeth APPLICANT: Wyeth APPLICANT: Wyeth APPLICANT: Wyeth APPLICANT: Wyeth APPLICANT: Wyeth APPLICANT: Wounts, William TITLE OF INVENTION: NUCLEIC ACID ARRAYS FOR DETECTING GENE EXPRESSION ASSOCIATED WITH TITLE OF INVENTION: HUMAN OSTEOARTHRITIS AND HUMAN PROTEASES FILE REFERENCE: 031896-043000 (AM 101081)
